It is an amazing tool. There are many programs that can do this for you like teamviewer, teamdesk, startup manager, startatlogon, startup manager pro, and so on. This tool was specifically designed to help you remove those startup programs you don't use. I recommend this program, it's worth it. I have this app, and when ever i restart my computer, it will remove itself. So this app was not bad. [Update] I would like to add that in my opinion this tool is still worth the money, but they could make some adjustments to how it works, like, there should be options that let you choose what, when, and how it starts, or to save the computer in between installations. --- author: - 'Matthew E. OnStart Pro is an application that simplifies the startup process and the removal of unwanted programs. It can be used to make sure you are not wasting your valuable time searching through the Start Menu for all your apps, no matter how long it takes you. You may also find yourself spending unnecessary time finding and opening programs that have been added automatically to the startup list. OnStart Pro provides a simple and well-structured interface with a tree view on the left side and a file list that displays the status, name and path of every startup app on the right. License: Shareware. \$29.00 to buy via registration linkRelated Articles In the past, most natural remedies for gum disease were considered unsafe and ineffective by the medical community. That's not the case anymore. Modern dentistry has brought new information regarding the effects and benefits of using natural remedies to restore gum health. How to Use a Coconut to Heal Gum Disease Coconut oil is one of the best natural remedies for treating gingivitis and gum disease. It may also help prevent gingivitis from recurring. Coconut oil is a natural antibacterial and anti-inflammatory agent. When applied directly to inflamed gums, it can be used to treat gingivitis, promote gum healing and prevent it from receding. To prepare coconut oil to use for gingivitis treatment, place a tablespoon of coconut oil into a glass jar. Stir thoroughly, and then cap the jar. Allow the coconut oil to stay at room temperature. This will allow the oil to settle. Use a toothbrush to massage the coconut oil into the affected gum tissue for 30 to 60 minutes. When applying the coconut oil, use circular motions to gently massage the oil onto the affected gum tissue. Massaging the oil helps draw the oil into the gum tissue, and the circular motions make it easier to apply the oil onto the gums. Leave the coconut oil on your gums overnight. The next morning, rinse the oil from your gums with warm water. Use Coconut Oil to Prevent a Reoccurrence Gum disease usually does not heal on its own. It requires professional treatment, such as gum surgery. After surgery, the area may require a week of recovery, and then the gum disease may begin to recede. This type of gum disease is called "active." It may require several additional treatments to repair the gum tissue, and it may recur. However, it is not usually treated with a coconut oil remedy. Coconut oil can actually help prevent this type of gum disease. To use coconut oil for preventing gum disease from recurring, use the same method as described above. The process is the same, except you put the coconut oil on your gums while they are still recovering from surgery. Because the gums are still recovering, the coconut oil will penetrate the gums and start
